

REMARKS

In the Decision by the Board dated September 28, 2005, the Board states that the browser instances of Peyer are considered to be part of the same browser. Therefore, Applicant has amended claim 1 to recite that the same browser instance has a user interface and loads a script handler; amended independent claim 10 to recite that the same browser instance has a user interface and loads a file that is associated with predetermined instructions; amended independent claim 12 to recite invoking a script handler to create a user interface in the same browser instance that displays information associated with multimedia data; amended independent claim 16 to recite loading a file into a browser and creating an interface in the browser based on instructions associated with the file in the same browser instance; amended claim 20 to recite instructions that when executed cause a system to generate an interface in the same browser instance as the browser instance that displays information that is associated with multimedia data; amended independent claim 21 to recite the same browser instance that has a user interface and loads a markup language file that is associated with a script handler; and amended independent claim 30 to recite that the same browser instance has a user interface and loads a file that is associated with predetermined instructions.

Thus, Applicant requests reconsideration of the application and a favorable action in the form of a Notice of Allowance, as none of the cited references teaches or suggests the same browser instance that performs the combination of features that are now recited in the independent claims. The Commissioner is authorized to charge any additional fees or credit any overpayment to Deposit Account No. 20-1504 (ITL.0215US).

Respectfully submitted,

Date: November 28, 2005
